

Key Search Engine

Search parameters and criteria available for identifying the cutting card for making a copy of the key.

INDIRECT KEY CODE: information often marked on the key head or cylinder from which to extrapolate the real combination associated to the key.

SILCA CUTTING CARD No. included in the paper catalogues or Silca electronic catalogue.

P263 Head-shape code

- Brass
- ☐ 9 Big pins

258

SILCA SERIES No. included in the paper catalogues or Silca electronic catalogue.

P275 Head-shape code

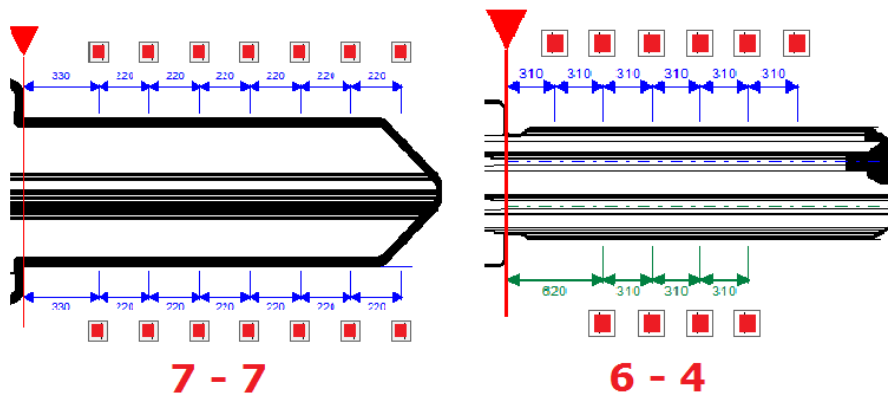

- Brass
- ☐ 8 Big pins
- ▷ Back milled profile

S102
S482

KEY BLANK or **SILCA REFERENCE** marked on all Silca key blanks and included in the Silca catalogues.

CUTS ON KEYS: cuts made on the key that form the combination or cutting sequence.

LOCKSMITH: lock system manufacturer.

CATEGORY: vehicle, motorcycle, cylinder.

USE: where the key is used, e.g. ignition or car boot.

APPLICATION MAKE: generally the make of the vehicle that uses the key.

APPLICATION MODEL: vehicle model that uses the key.

YEAR: period in which a key was used on a given model.

LOCK SYSTEM: trade name or reference assigned to a lock system.

The search result comprises full information that helps the operator to assess and choose the best cutting card to use when copying the key. For example:

- Details regarding cuts, such as spaces, depths, cutter, clamp.
- Key-cutting machine to be used.
- Table of codes associated to the cutting card.
- Silca key blank, replacements or other makes, if applicable.
- Key applications: cylinder trade name, type of cylinder; for vehicle keys there is a list of makes and models.
